SERVICES PROFILE

About Rootfloe

Rootfloe is a cybersecurity centric company. We specialize and work on cybersecurity services, develop the most secure web and mobile applications, secure APIs, build cybersecurity products and research within the cybersecurity domain. We are headquartered in London and work for client's based out of London and Europe. We have an experience of 55+ man years within our organization with varied experience and knowledge associated with the cybersecurity domain and software development. Below is a brief of different services we provide our client's.

"No job can be small or too big for us to execute"

Services we provide

Vulnerability Assessment

Our vulnerability assessment services will take an exhaustive look at your system, web and mobile applications, we will identify any low defence areas, and test to see just how far a hacker may be able to work his way into your system. We'll offer an assessment that gives you a comprehensive look at your cybersecurity preparedness – along with suggestions for future with training and preparation.

Penetration Testing

With our penetration testing services, you'll find out exactly how prepared your IT infrastructure including your web and mobile application is to get hit by a major cyber-attack. We'll simulate an actual assault so you can find out what problems may arise when the real thing comes your way.

Source Code Review

With our source code review service, we will check your application's complete code for security flaws using both manual and automated tools. We give you 100 % coverage rate with a technical report on how you can rectify the vulnerabilities.

Red-team Assessments

We can perform a Red-team Assessment on your business, using the exact methods that actual hackers use to test the limits of your system's security. And when we are through, we'll offer you everything you need to ensure no hacker can repeat what we've done.

SERVICES PROFILE

Configuration Review Assessment

If your business or organization needs a review of its network or infrastructure, we can perform a comprehensive audit that will give you all critical information about your system's security, including firewalls, routers, servers, and more.

Cloud Security Testing

As more of our vital information moves into the cloud, it becomes more important than ever to ensure maximum security. We can test your system to help you find weaknesses and flaws in every aspect of your cloud-based network and infrastructure. Then, we can help you plug the holes and ensure nothing essential ever gets compromised.

IoT Security Testing

As more of our daily lives becomes connected to the internet, the need for effective and efficient security multiplies. This is especially true pertaining to the growth of IoT. We can give your business and customers peace of mind by testing the limits of your IoT security system, ensuring hackers aren't able to use your products as a doorway into your or your customers networks. Then, we can offer you advice, reports on the vulnerabilities with the fixes and respective tools you would need to create a truly secure device.

Social Engineering

Social engineering attacks have grown exponentially in recent years. We can help you develop and implement the security measures needed to minimize the impact of social engineering attacks on your employees and customers.

Managed Security Services

An effective network involves dozens of moving parts and connections. If you're going to maintain tight and effective security, you'll need to make sure that every part of your network is locked down. We can help you manage all of it, from firewalls to IPS and everything in between.

Threat Intelligence Services

Hackers are constantly evolving – developing new methods of worming their way into systems and stealing vital information. That's why we're dedicated to gathering data from across the web and staying informed about current and emerging dangers. We can use that information to help you stay ahead of every threat, so you're never caught off-guard.

SERVICES PROFILE

Your Information.
Our Responsibility.

Risk and Compliance Services

We can work with you to keep your business above board by managing risk and helping you remain compliant when it comes to all your compliance needs(GDPR, PCI-DSS, SOX, HIPAA, Cybersecurity Essentials and Essentials Plus.)

Cyber Awareness Training (Corporate)

Statistics show that nearly 50% of cybersecurity incidents are the result of human error. Don't let one of your employees unknowingly leave your company vulnerable. Instead, take advantage of our cyber awareness training and ensure that each member of your company is equipped with the knowledge and tools they need to mitigate risk and minimize cyberattacks.

Application Development

We will create your dream applications, be it Web, Mobile or custom APIs to be the most secure, professional, with an excellent front/back facing UI and with perfect business logic to match.

IT Support Services

We at Rootfloe provide IT Support services for small, medium and large organisations. Our IT professionals are well experienced and work round the clock via phone, email and with a centralized service desk to deal with all your system related issues and challenges you might be facing on a daily basis. We can make your work much easier and also deliver bespoke solutions as per organisations line of business and leverage the existing support system.

Talent Management

Pick Top-notch Technical Resources with our IT Staffing Services for your organization for a long or short duration as you require.
